

# To Completely Remove Android Studio From windows

## Step 1. Run the Android Studio uninstaller:

The first step is to run the uninstaller. Open the Control Panel and under Programs, select Uninstall a Program. After that, click on “Android Studio” and press Uninstall. If you have multiple versions, uninstall them as well.

## Step 2. Remove the Android Studio files:

To delete any remains of Android Studio setting files, in File Explorer, go to your user folder [%USERPROFILE%], and delete .android, .AndroidStudio and any analogous directories with versions on the end, i.e. .AndroidStudio1.2, as well as .gradle and .m2 if they exist.

Then go to %APPDATA% and delete the JetBrains directory.

Finally, go to C:\Program Files and delete the Android directory.

## Step 3. Remove SDK:

To delete any remains of the SDK, go to %LOCALAPPDATA% and delete the Android directory.

## Step 4. Delete Android Studio projects:

Android Studio creates projects in a folder [%USERPROFILE%\Android StudioProjects], which you may want to delete.

Done.

Thank you!
